Hi Kaijia,

Great work from the team, here are some comments:

- Excellent prototype with easy instructions. Inclusion of cone boundaries can be important, how can we add increased alerting and control to 3d boundaries (construction walls/cones). I found my car to be running over the cones constantly
- Will center status from LCS be displayed to the user?
- For Figure 7 seems like LMS will be off, how does override_steering play a role here?

Looking forward to seeing the presentation. Thanks!

Ayush A
